

Speedtail Will Be Fastest McLaren Road Car

McLaren Automotive has informed the 106 clients fortunate enough to have reserved an example of the car they previously knew only as BP23 that it will be named the McLaren Speedtail.

The world's first Hyper-GT and McLaren's next entrant to its Ultimate Series, the Speedtail will achieve the highest top speed of any McLaren yet, with

the capability to exceed the 391 km/h peak speed of the legendary McLaren F1 road car. Its design, teased in a series of sketches, will be flowing and highly streamlined, incorporating exquisite new materials to facilitate limitless possibilities for tailoring through McLaren Special Operations (MSO).

The news follows the an-

ouncement by McLaren Automotive CEO, Mike Flewitt, during the Geneva Motor Show press conference that a public reveal of the McLaren Speedtail can be expected this year. The 106 customers who have reserved one will be invited to see it first.

The next addition to the McLaren Ultimate Series will be both the fastest-ever (in a straight line)

and the most luxurious McLaren. Featuring a three-seat cockpit design with a central driving position – the same layout as the F1 – and a petrol-electric hybrid powertrain, the McLaren Speedtail will deliver the unparalleled blend of extreme performance and sporting luxury that befits its status as the ultimate road-going McLaren.

The production of the McLaren Speedtail was allocated before the car was announced in November 2016. Production is due to begin at the end of next year, with every McLaren Speedtail personalised to each owner's taste by McLaren Special Operations (MSO), the division of McLaren Automotive responsible for bespoke customer commissions.

New Tips On Driver Safety During Summer Road Trips

For many, summer is about freedom on the open road. It's a carefree time, focused on fun, family and adventures.

What it's usually not is a time to realize that more time on the road can mean a higher risk of an accident. In the U.S. alone, there are 10 million car accidents every year. This doesn't mean that your vacation can't be all fun and games -- it just takes some planning ahead.

When preparing for a road trip, many people make sure their vehicle is up to date on its maintenance check-up and they may know how to change a tire -- but being prepared for a road trip is much more than that.

Today's drivers must follow a few new tips for successful sum-

mer travel and consumer safety, according to Gold Class, which provides industry-recognized training to collision repair shop technicians.

Solid preparation can mean more successful road trips. Here are a few tips travelers should keep in mind.

* Remember that distractions go beyond your phone. While much of today's in-vehicle technology is designed to help mitigate vehicle collisions, you have to know its limitations. Don't forget that the very technology helping keep you safe in your vehicle can also be a distraction: At any given moment, approximately 660,000 people are manipulating electronic devices or using cell phones while driving. Test tech-

nology features you don't typically use before you go, and learn how to best apply new vehicle technology at MyCarDoesWhat.org.

* Don't just rely on technology. Be aware of dramatic speed shifts that might alert you to changing driving conditions ahead (such as a small town, school zone or

dangerous curves). This is even more important when driving in unfamiliar terrain. While navigation systems, adaptive headlights that can "see" around curves and the latest curve speed warning technology can all help, reviewing a map in advance and paying attention to road signage and conditions can be a big help.

* If you're drinking, know ride-sharing options. A drunk driving-related accident occurs every two minutes. Besides friends, consider ride-sharing options like Uber and Lyft.

* Make an educated decision: Getting into a car accident while traveling can introduce another layer of complexity. Having to make a rushed decision about where to repair your car only adds to a stressful situation.

Do your research ahead of time on www.GoldClass.com to find shops in the United States that have technicians who have received updated, model- and automaker-specific training and the knowledge to properly fix your vehicle.
